PoE/PoE+ Series Illuminators

The iluminar PoE/PoE+ series illuminators are powered by Power over the Ethernet (PoE) via a network cable connector to a PoE IEEE802af/IEEE802at compliant switch.

The power consumption of the illuminators comply with PoE IEEE802af and IEEE802at.

These illuminators are not supplied with a power cord. Instead, they are supplied with a 2.5m (8') long network cable. At the end of the network cable is a female RJ45 Cat5e compliant connector with an IP68 rated cover.

The mating IP68 rated cover is supplied with the illuminator. Follow the instructions supplied with the cover on how to attach it to the male Cat5e network cable.

ENSURE THAT THE IP68 RATED COVER IS CORRECTLY FITTED AND ATTACHED TO THE NETWORK CABLE. IF THIS IS NOT FITTED CORRECTLY MOISTURE CAN GET INTO THE CONNECTOR AND MAY CAUSE THE UNIT TO MALFUNCTION. THIS WOULD VOID THE WARRANTY ON THE PRODUCT.
